Innovation

Since its creation, Multimedia Connect has always been at the forefront of product innovation. We were among the first manufacturers to certify a Category 6 connector (in 2002) and a Category 6a (ISO) connector (in 2010).

«In addition to the performance of our systems, our R&D efforts are focused on designing solutions which facilitate installers and end-users work».

Keep it simple

With Multimedia Connect, technology means simplicity. «We are pioneer in the development of tool less termination and our objective is to invent products and systems which are easy to install and easy to manage».

The opportunities of IP convergence

The development of IP (Internet Protocol) in applications such as CCTV, Access Control, Public Address, Video, Audio ... means that structured cabling systems are now used in a large variety of new environments.

At Multimedia Connect, we have identified this fundamental trend of our industry and we are developing specific products and systems which facilitate the convergence between cabling infrastructures and these new IP applications.
